Anti-$GABA_A$ Receptor, β_3-Subunit

Catalog Number: 863-GB3C **Size:** 100 µl

Product Description: Affinity purified rabbit polyclonal antibody

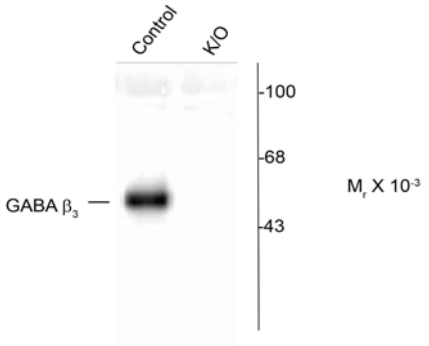
Applications: **WB**: 1:1000

Antigen: Fusion protein from the cytoplasmic loop of the β_3-subunit of rat $GABA_A$ receptor.

Species reactivity: The antibody has been directly tested for reactivity in Western blots with rat and mouse tissue.

Biological Significance: *Gamma*-aminobutyric acid (GABA) is the primary inhibitory neurotransmitter in the central nervous system, causing a hyperpolarization of the membrane through the opening of a Cl^- channel associated with the $GABA_A$ receptor ($GABA_A$-R) subtype. $GABA_A$-Rs are important therapeutic targets for a range of sedative, anxiolytic, and hypnotic agents and are implicated in several diseases including epilepsy, anxiety, depression, and substance abuse. The $GABA_A$-R is a multimeric subunit complex. To date six αs, four βs and four γs, plus alternative splicing variants of some of these subunits, have been identified (Olsen and Tobin, 1990; Whiting et al., 1999; Ogris et al., 2004). Injection in oocytes or mammalian cell lines of cRNA coding for α- and β-subunits results in the expression of functional $GABA_A$-Rs sensitive to GABA. However, coexpression of a γ-subunit is required for benzodiazepine modulation. The various effects of the benzodiazepines in brain may also be mediated via different α-subunits of the receptor (McKernan et al., 2000; Mehta and Ticku, 1998; Ogris et al., 2004; Pöltl et al., 2003).

Anti-$GABA_A$-Receptor, β_3-Subunit



Western blot of 5-7 ug of mouse cerebellum lysates from wild type (Control) and β_3 knockout (β_3 K/O) animals showing specific immunolabeling of the ~53k β_3-subunit of the $GABA_A$-R in the wild type but not in the β_3 K/O animals.

WB = Western Blot **IF** = Immunofluorescence **IHC** = Immunohistochemistry **IP** = Immunoprecipitation
Packaging: 100 µl in 10 mM HEPES (pH 7.5), 150 mM NaCl, 100 µg per ml BSA and 50% glycerol. Adequate amount of material to conduct 10-mini Western Blots.
Storage and Stability. For long term storage –20oC is recommended. Stable at –20oC for at least 1 year.
Shipment: Domestic - Blue Ice; International – Blue Ice or Dry Ice.

Purification Method: Prepared from rabbit serum by affinity purification using a column to which the fusion protein immunogen was coupled.

Antibody Specificity: Specific for the ~53k β_3-subunit of the $GABA_A$ receptor in Western blots.

Quality Control Tests: Western blots performed on each lot.
